

E-Bike Charging Station

» for electric bike batteries, electric scooters, tools and equipment

Construction:

- Robust construction in high-quality galvanized steel sheet
- Structured powder coating, weather-resistant
- Per module: 4 charging compartments + 1 service compartment at the bottom
- Body material depth: 1.0 – 1.5 mm
- Shelves with angled edges
- Rain-protected ventilation openings
- Extended roof
- Corrosion- and weather-resistant base
- Leveling feet (0–3 cm)
- Ready for floor installation

Variants:

- Various locking systems and color options, **see page 3**
- 1 to 4 modules side by side
- 4 to 16 charging compartments

Equipment:

- Two charging outlets per compartment (Available in types E, F, J, and others)
- Optional: LED lighting under the roof with motion and light sensors

Doors:

- Double-wall, dust- and moisture-protected
- Body material depth: 1.0 mm
- Door opening angle: approx. 100°
- Magnetic door closure for firm and aligned closing
- Under-door kickplate for rainwater drainage
- Locking system of choice, **see page 4**

Electrification (per module):

- Per compartment: double outlet, 16 A / 230 V, IP44
- Doors with integrated grounding cable
- Overvoltage protection
- Requires on-site electrical connection:
400 V / 3x 16 A
- Service compartment at the bottom with cylinder lock and RCD-equipped electrical box for external power

Installation instructions:

- Foundation matching the module footprint, minimum depth of 50 cm
- Protective sleeve for connection cable, centered in the foundation
- 1 power cable per module
- Cross-section of the connection cable according to the distance from the power source (recommended type NYY-J 5x2.5 mm² or equivalent)
- Additional information: see user manual
